The instruction: \"Do not use ID if the value has number in it.\" So we can use ID for those without numbers, but avoid ID for ext-gen630. Provide only Java code, no explanations.\n\nWe need to extract the DOM? Probably they want to locate elements and maybe perform actions. Provide code that finds username, password fields and submit button using appropriate locators (By.id for first two, By.cssSelector or By.xpath for submit). Provide code snippet.\n\nWe must not include any explanation, just code.\n\nLet's produce a class with WebDriver driver; then locate elements.\n\nWe can use By.id for first two, By.cssSelector for button: input[type='submit'][value='Submit'].\n\nProvide code.\n\nLet's output:\n\nWebDriver driver = new ChromeDriver();\ndriver.get(\"url\");\nWebElement username = driver.findElement(By.id(\"createLeadForm_Username\"));\nWebElement
